Question 1

People of Nkozi Sub County, are facing a problem of low yields in green pepper production, due to loss of soil nutrients in their farms. The problem was addressed to Dean of Faculty of Agriculture, to find out a solution. The dean assigned each students of year 1 agric, to design a suitable randomized experiment using selected types of organic manure to see whether the evaluation findings can be a solution to the problem. (35 marks)

NB. Size of the plots 1x1.5 meters

Label the experiment Cleary.

Use available materials important subjects

Question 2

Explain the common management practices of seedlings in a nursery bed from germination period to transplanting. (15 marks)
